TM10 Tail light Hybrid & Full-LED

The flexible light for every application

ERMAX®

Innovative lighting system solutions
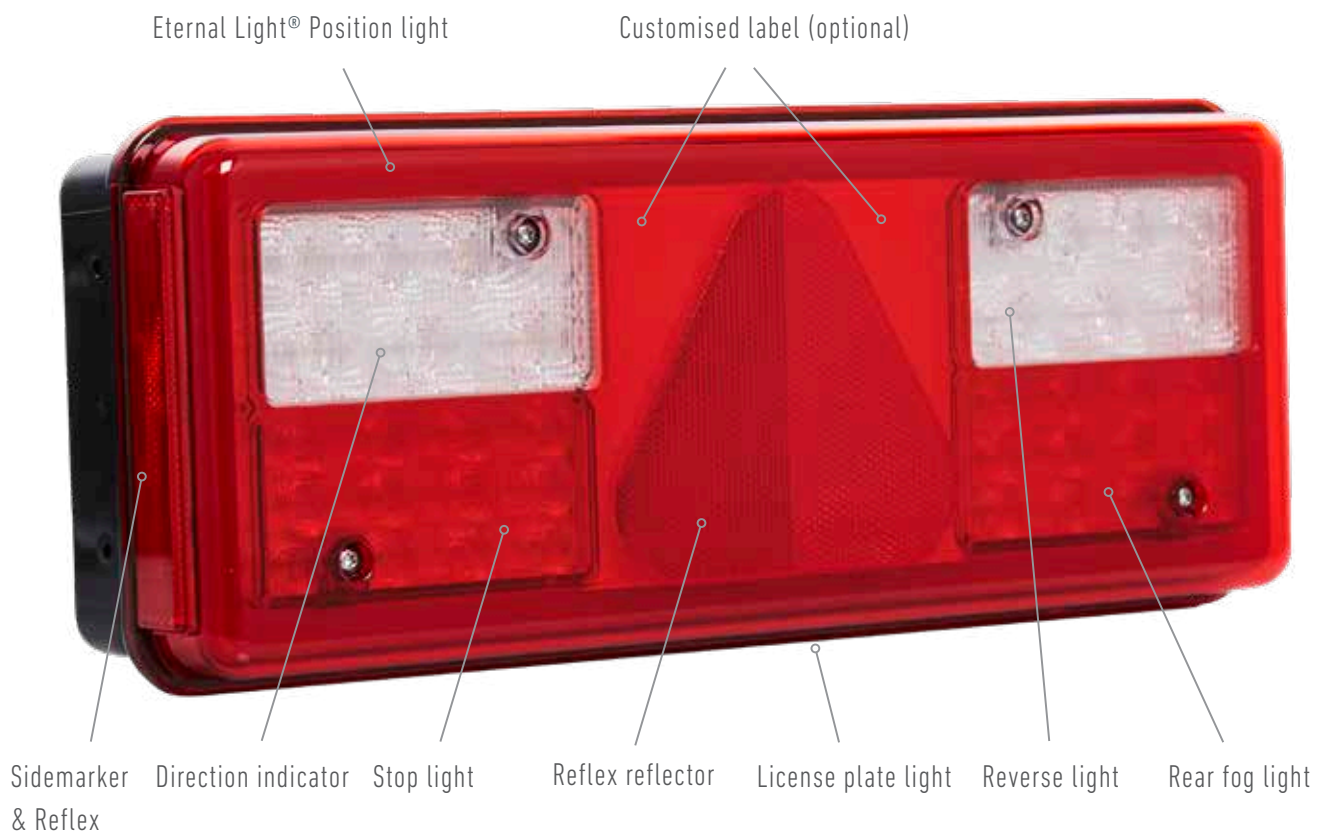

Newest technology Eternal Light®

The modern and impact-resistant tail light from Ermax with long-lasting advantages

The TM10 7-function tail light from Ermax is available in two versions: As a hybrid version for an innovative design and as full-LED being the most economical solution. Both versions can be used for truck and trailer creating a uniform look at both the truck and the trailer and making spare part supply easy, especially when the fleet consists of several brands.

Hybrid version - with modern position light and license plate light in LED and other functions with bulb technology. The hybrid tail lights can be converted into full-LED according to customer needs due to the modular design.

Full-LED - for fleets recognising advantages in choosing the economical solution with the lowest requirement for spare parts – an investment in the future.

The new tail lights are available in several versions with various functions, all meeting any need for function and mounting requirements.

Eternal Light® Position light   Customised label (optional)

Sidemarker & Reflex   Direction indicator   Stop light   Reflex reflector   License plate light   Reverse light   Rear fog light
